

# TITANIC

LIBRO 3

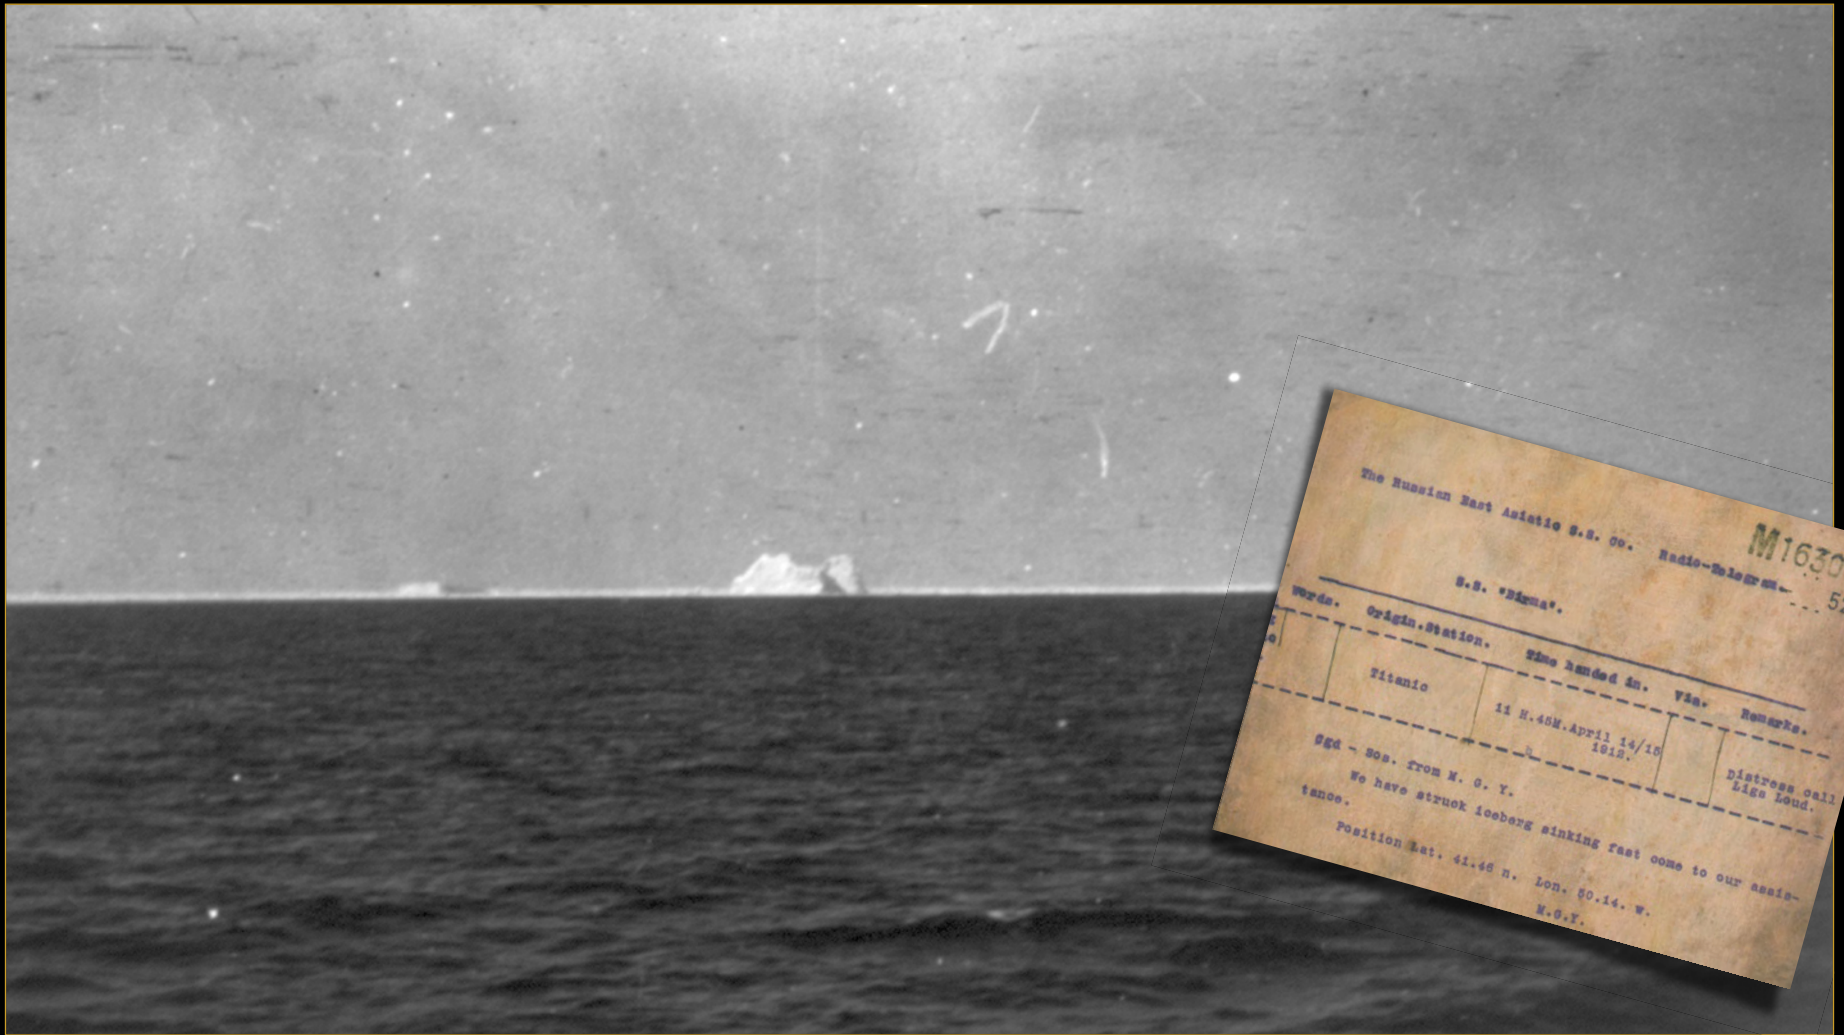

# EL TRANSATLÁNTICO INSUMERGIBLE

Aunque el RMS *Titanic* estaba equipado con numerosos y extraordinarios avances en materia de seguridad, según los obsoletos reglamentos de seguridad marítima de entonces, el transatlántico no necesitaba más que 20 botes salvavidas a bordo: suficientes para tan solo un tercio de la tripulación y los pasajeros. Minutos antes de la medianoche del 14 de abril de 1912, el buque colisionó con un iceberg a gran velocidad y empezó a hundirse rápidamente. Debido a la falta de botes, perecieron más de 1500 personas y solo 710 lograron sobrevivir. Como consecuencia directa de esta tragedia, se aprobaron nuevos estándares internacionales de seguridad de amplio alcance, muchos de los cuales siguen vigentes hoy en día.

↑ Botes salvavidas en pescantes del *Titanic*.

↑ Fotografía de la supuesta localización del desastre, tomada desde el SS Carpathia, que rescató a supervivientes del naufragio del Titanic.

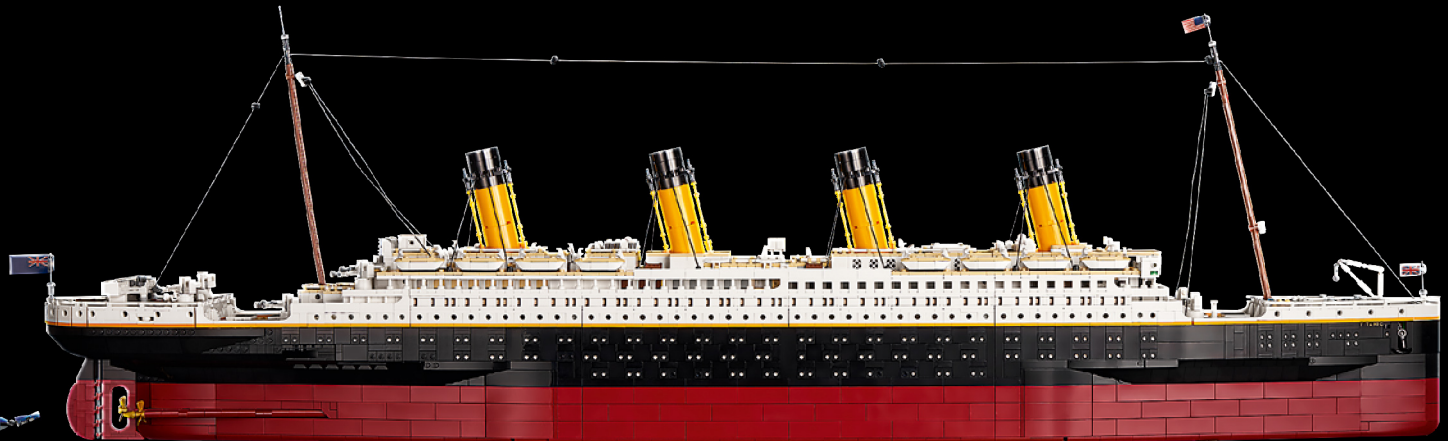

↗ Telegrama de solicitud de ayuda transmitido por el RMS Titanic al SS Birma.

# IMPRESIONANTE ESCALA

En su botadura, el *Titanic* era la nave más grande jamás construida por el hombre. Tenía 269 m de eslora y medía 53,3 m desde la parte inferior del casco hasta la parte superior de sus chimeneas. De la misma manera, la versión LEGO® del RMS *Titanic* es el modelo LEGO de mayor longitud que hemos creado hasta ahora y uno de los más elaborados.

*La versión LEGO del Titanic está diseñada a escala 1:200, la misma utilizada para el set LEGO Architecture Estatua de la Libertad.*

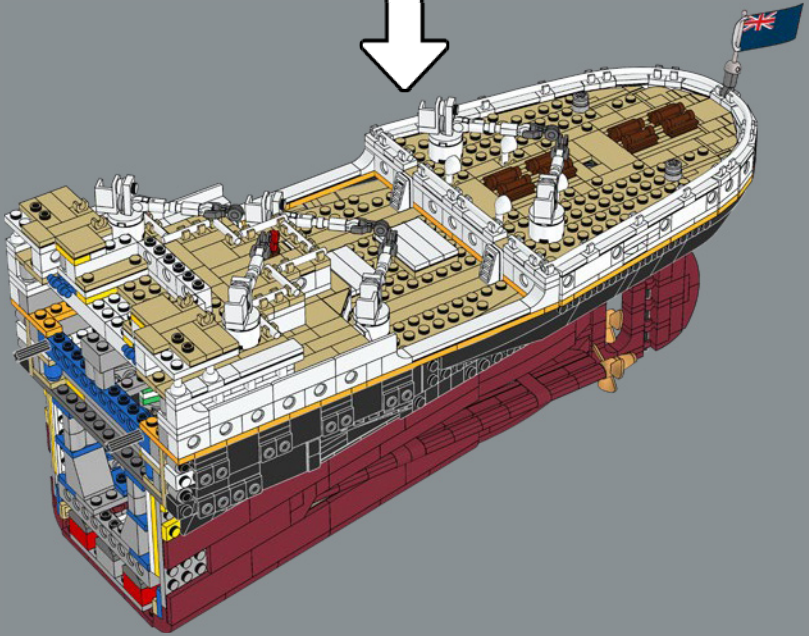

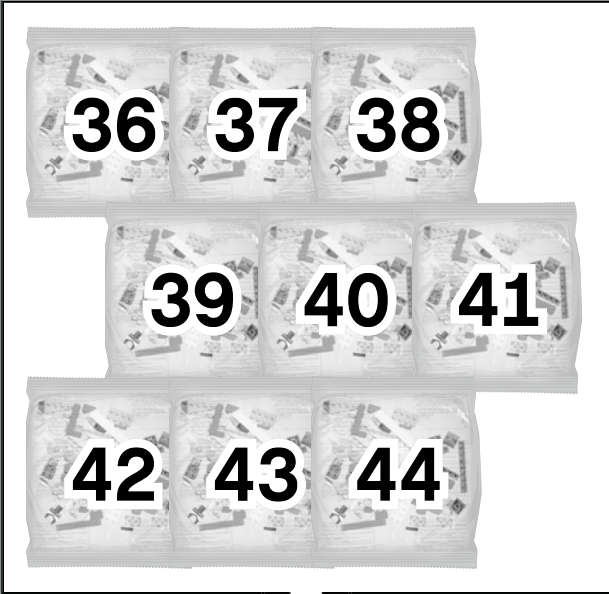

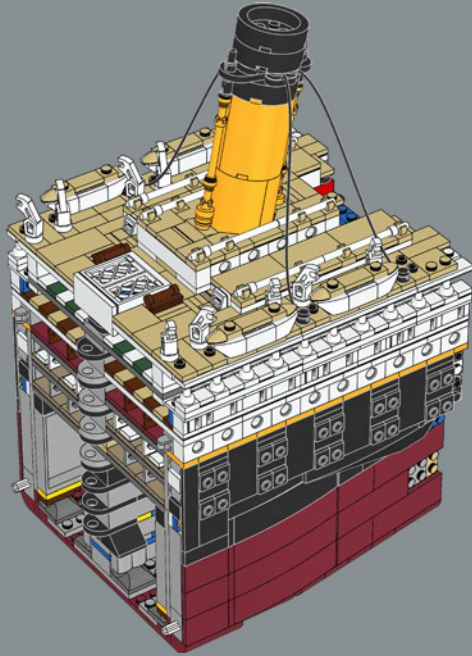

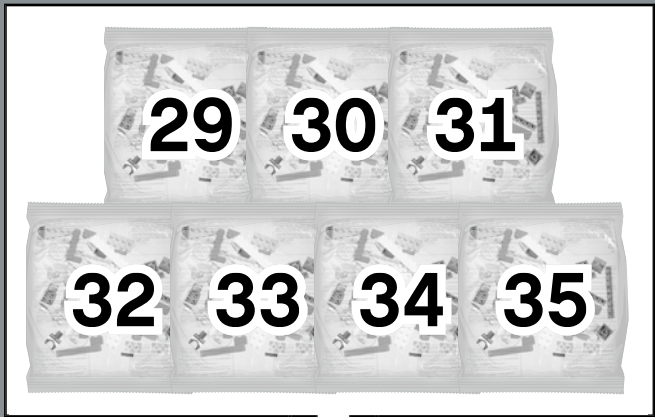

*El Titanic era 11 veces más largo que la ballena azul, el animal conocido más grande que haya poblado la Tierra.*

TITANIC

## SECCIÓN 5:

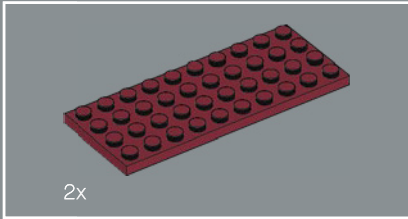

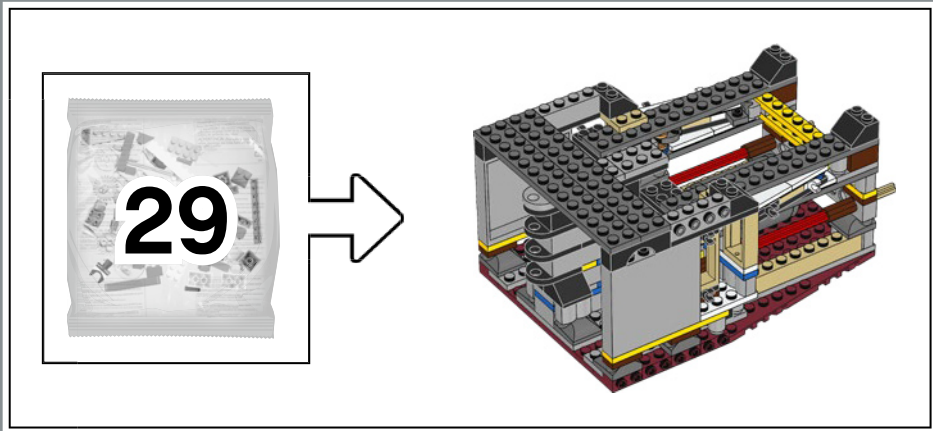

# CHIMENEA Y SALA DE MÁQUINAS

En esta sección, el modelo se estrecha conforme sus líneas se van afilando hacia las hélices y el timón en la popa del barco. También construirás la última chimenea. En el *Titanic* real, esta chimenea no estaba conectada a ninguna caldera; se incluyó en el diseño de la nave para realzar su belleza y sensación de equilibrio.

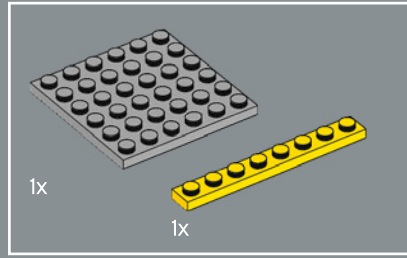

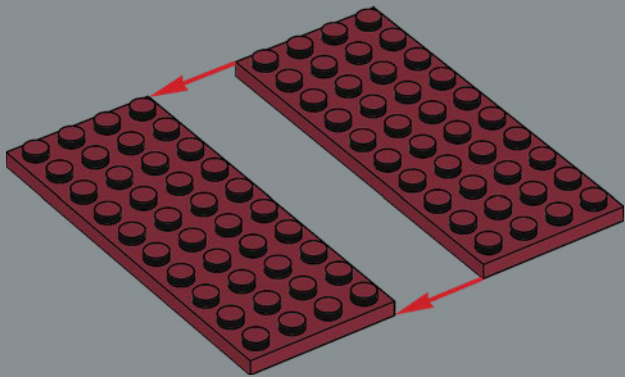

↓ En la parte superior de esta sección, incorporarás la sala de lectura y algunos camarotes de segunda clase.

El sistema de suministro eléctrico del *Titanic* era capaz de producir más potencia que una central eléctrica de una ciudad de tamaño medio de la época.

145

↓ Los detalles exteriores de esta sección incluyen el puente de popa y bancos para los pasajeros de tercera clase.

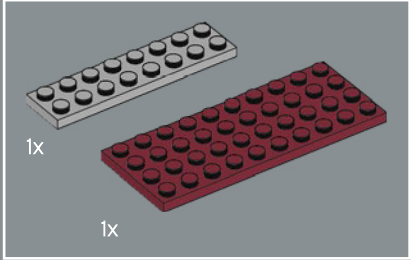

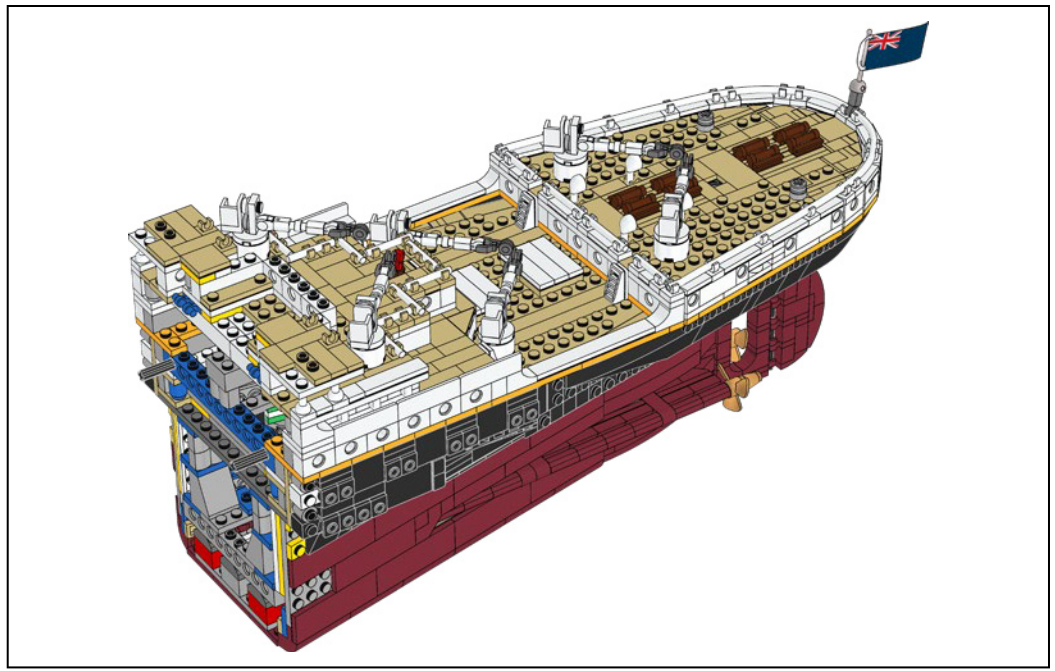

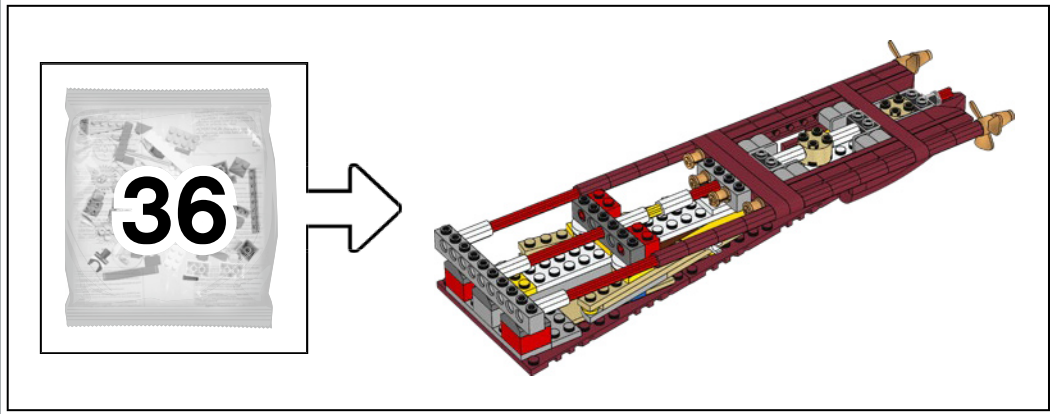

SECCIÓN 6:

## POPA Y CUBIERTA DE POZO

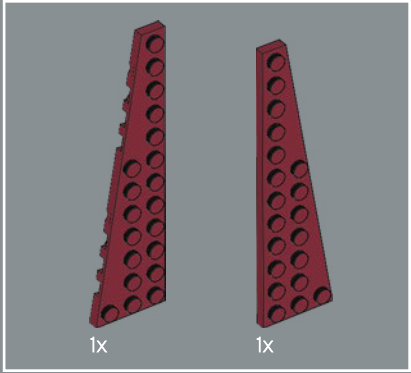

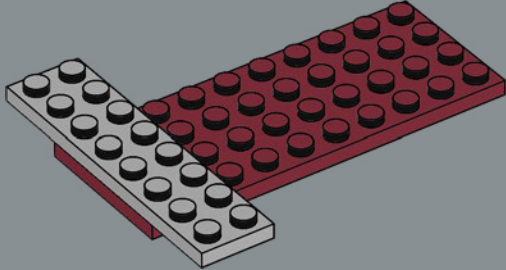

Esta sección final es la más complicada del casco e incluye el timón y tres árboles de transmisión principales que conectan las hélices a los motores. Vas a construir los dos motores de pistones principales vinculados directamente a las hélices de babor y estribor. Al girar las hélices, se mueven los cigüeñales y los pistones del motor en el interior del modelo.
