

TITANIC

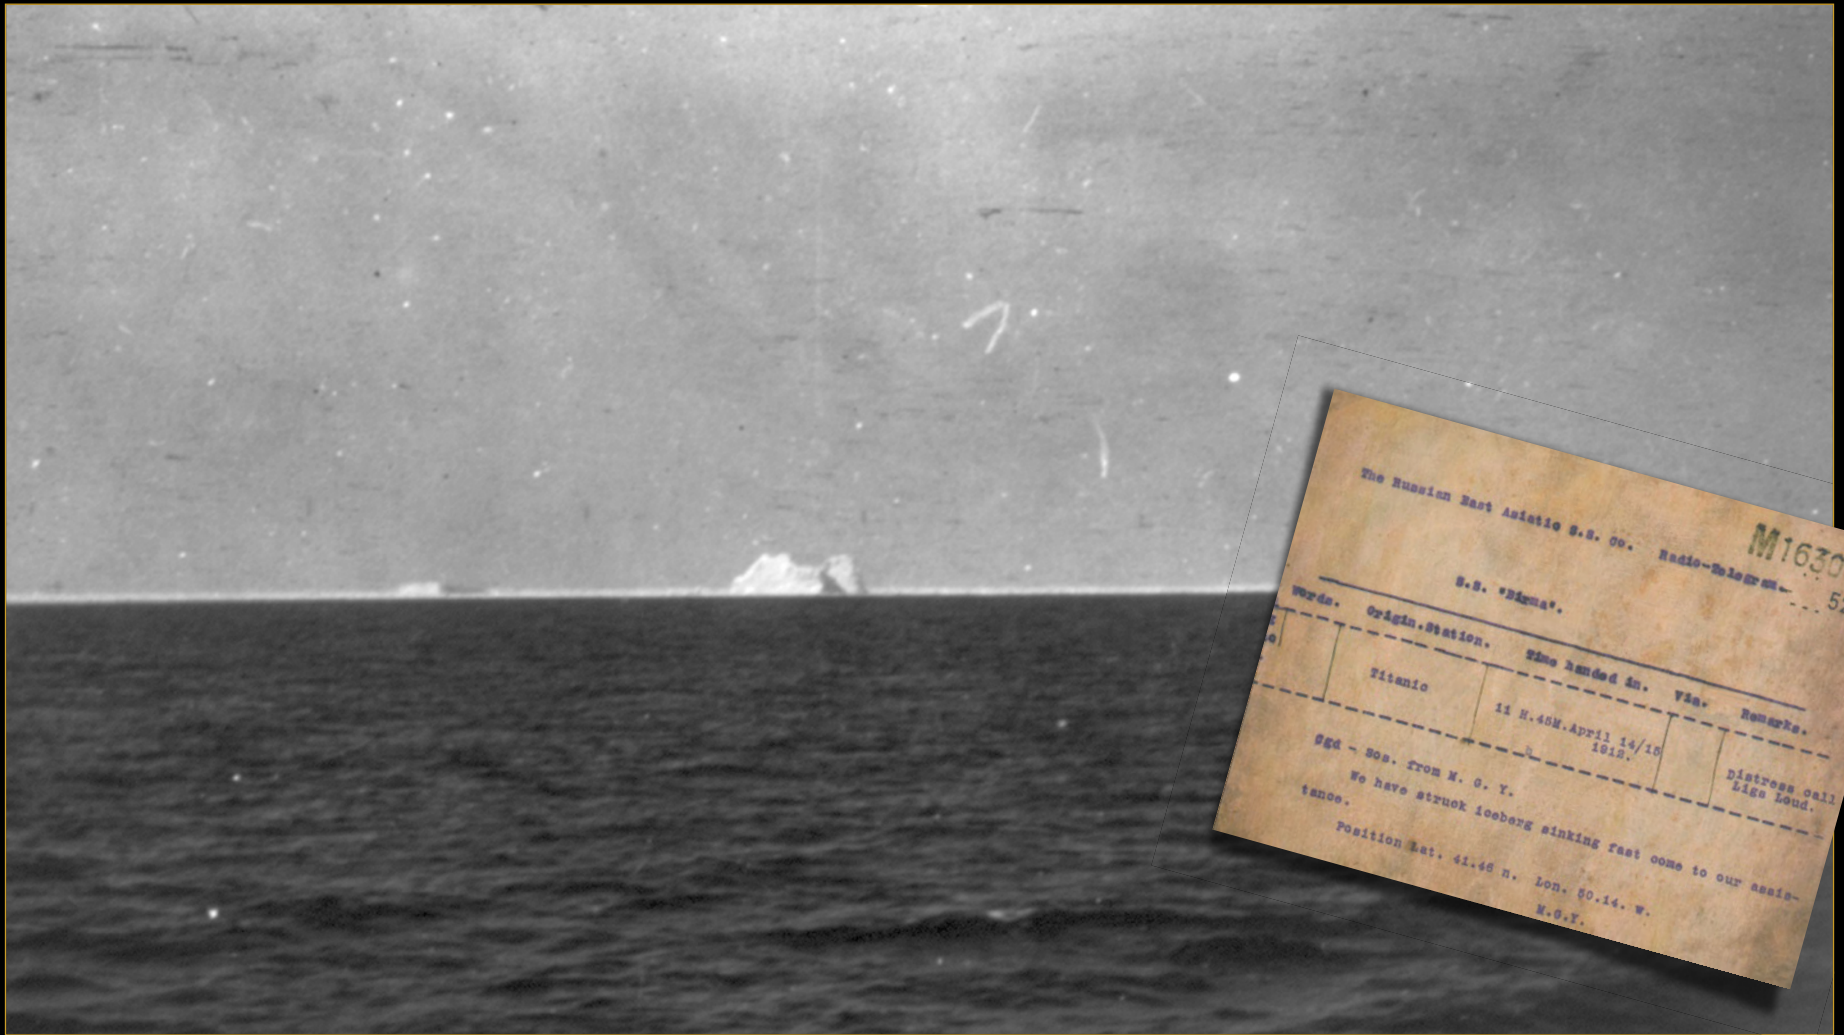

LIBRO 3

IL TRANSATLANTICO INAFFONDABILE

Sebbene l'RMS *Titanic* vantasse molte caratteristiche di sicurezza avanzate, le obsolete normative sulla sicurezza marittima del tempo imponevano che il transatlantico fosse dotato di sole 20 scialuppe di salvataggio, sufficienti per appena un terzo del suo equipaggio e passeggeri. Quando entrò in collisione con un iceberg ad alta velocità poco prima della mezzanotte del 14 aprile 1912 iniziando rapidamente ad affondare, a causa del numero di lance di salvataggio insufficiente, solo 710 persone sopravvissero e oltre 1.500 perirono nell'incidente. Una diretta conseguenza della tragedia fu l'introduzione di nuovi standard internazionali di sicurezza, onnicomprensivi, molti dei quali sono ancora in vigore oggi.

↑ Le scialuppe di salvataggio nelle loro gruette sul *Titanic*.

↑ Il luogo presunto del disastro rilevato dalla SS Carpathia intervenuta per soccorrere i sopravvissuti del Titanic.

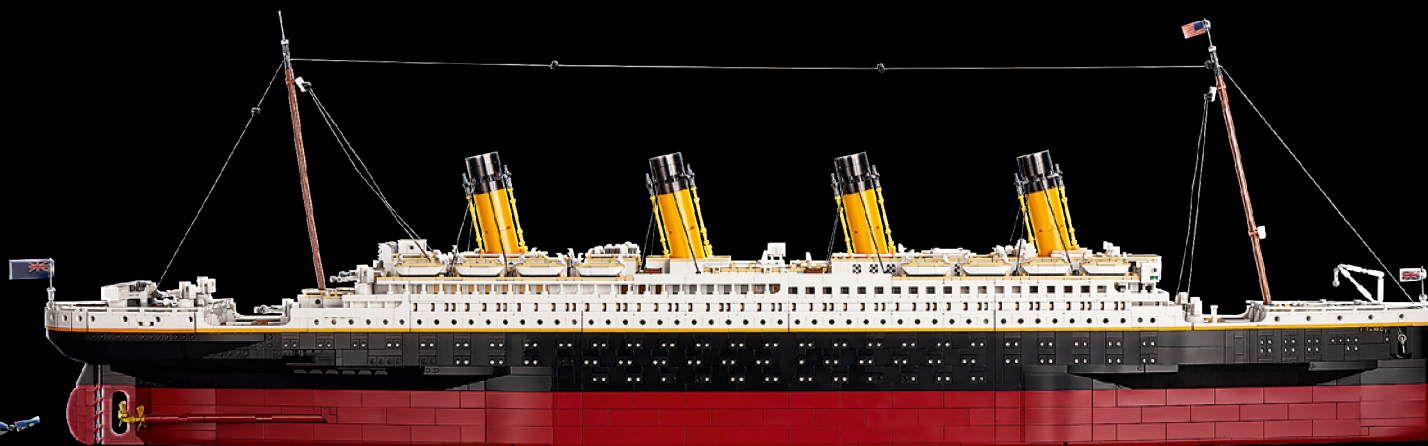

↗ Un telegramma trasmesso dall'RMS Titanic alla SS Birma richiedendo assistenza.

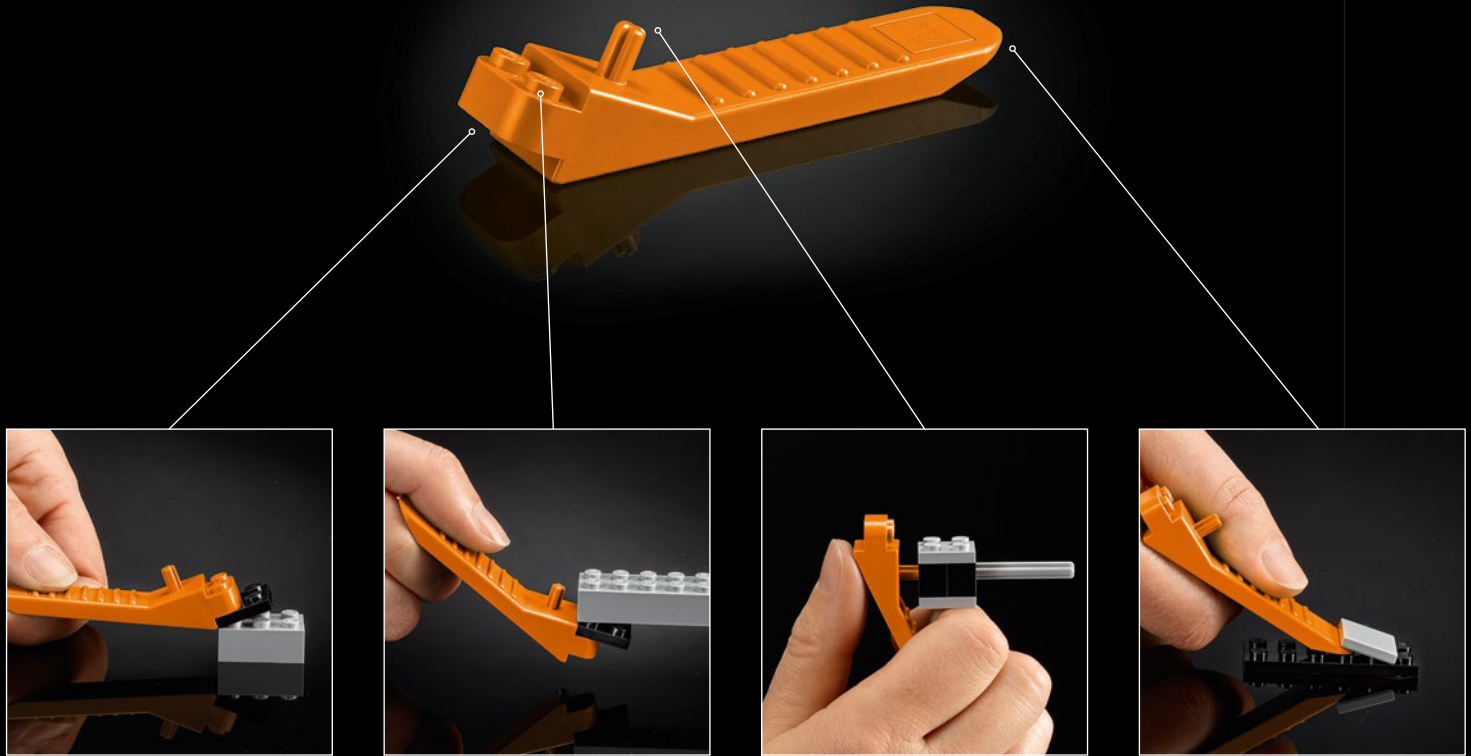

UNA SCALA STRAORDINARIA

Al momento del varo, il *Titanic* era la più grande imbarcazione mai realizzata dall'uomo. Era lunga 269 metri e misurava 53,3 metri dal fondo dello scafo alla cima dei fumaioli. Allo stesso modo, la versione LEGO® dell'RMS *Titanic* è il modello più lungo mai creato per una collezione LEGO e uno dei più complicati.

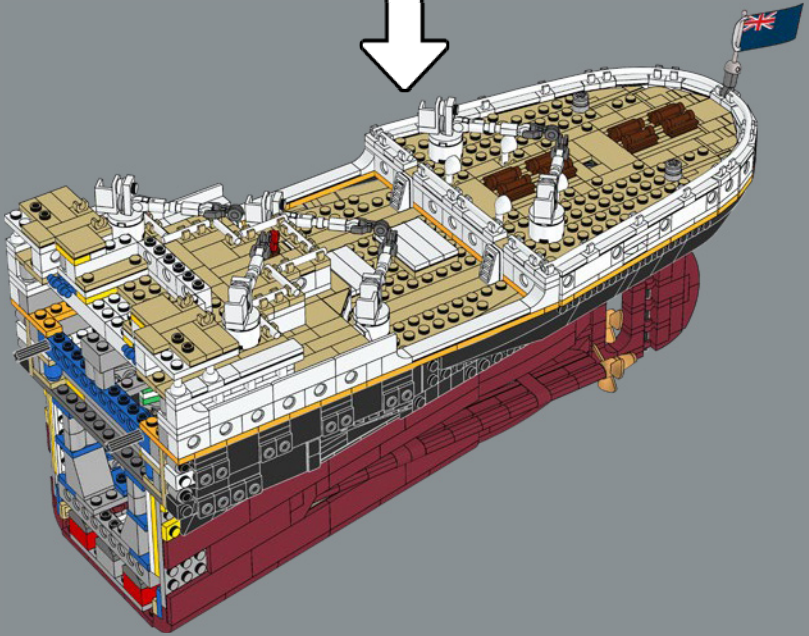

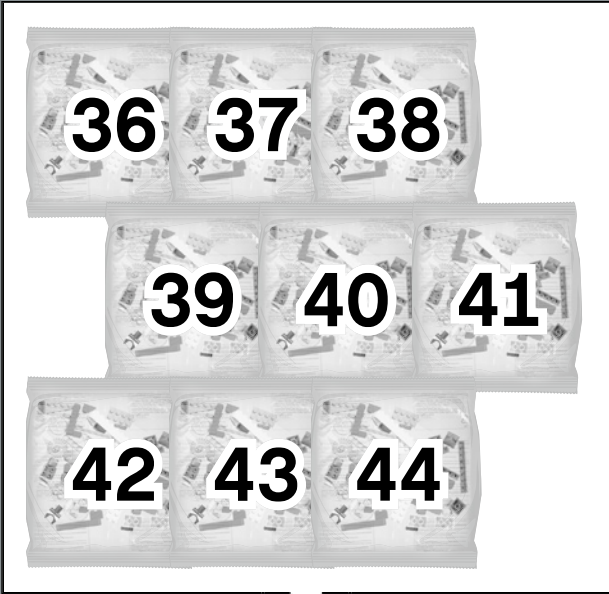

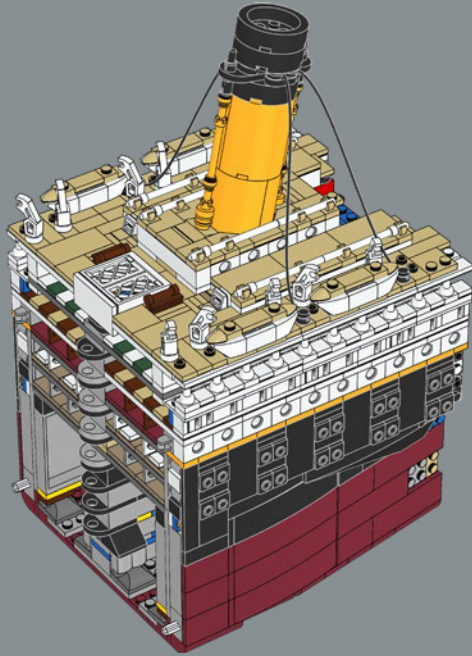

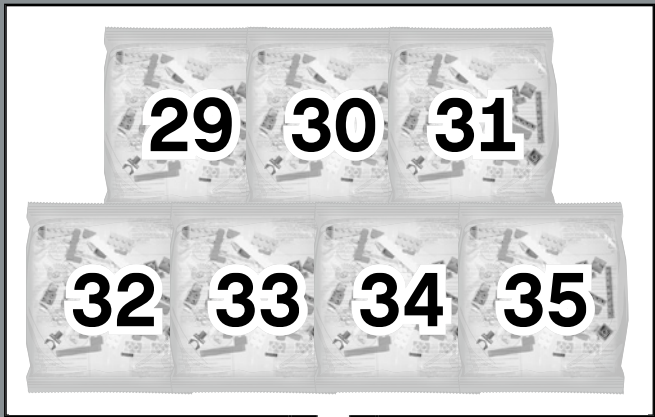

La versione LEGO del Titanic è costruita in scala 1:200, la stessa scala del set Statua della Libertà LEGO Architecture.

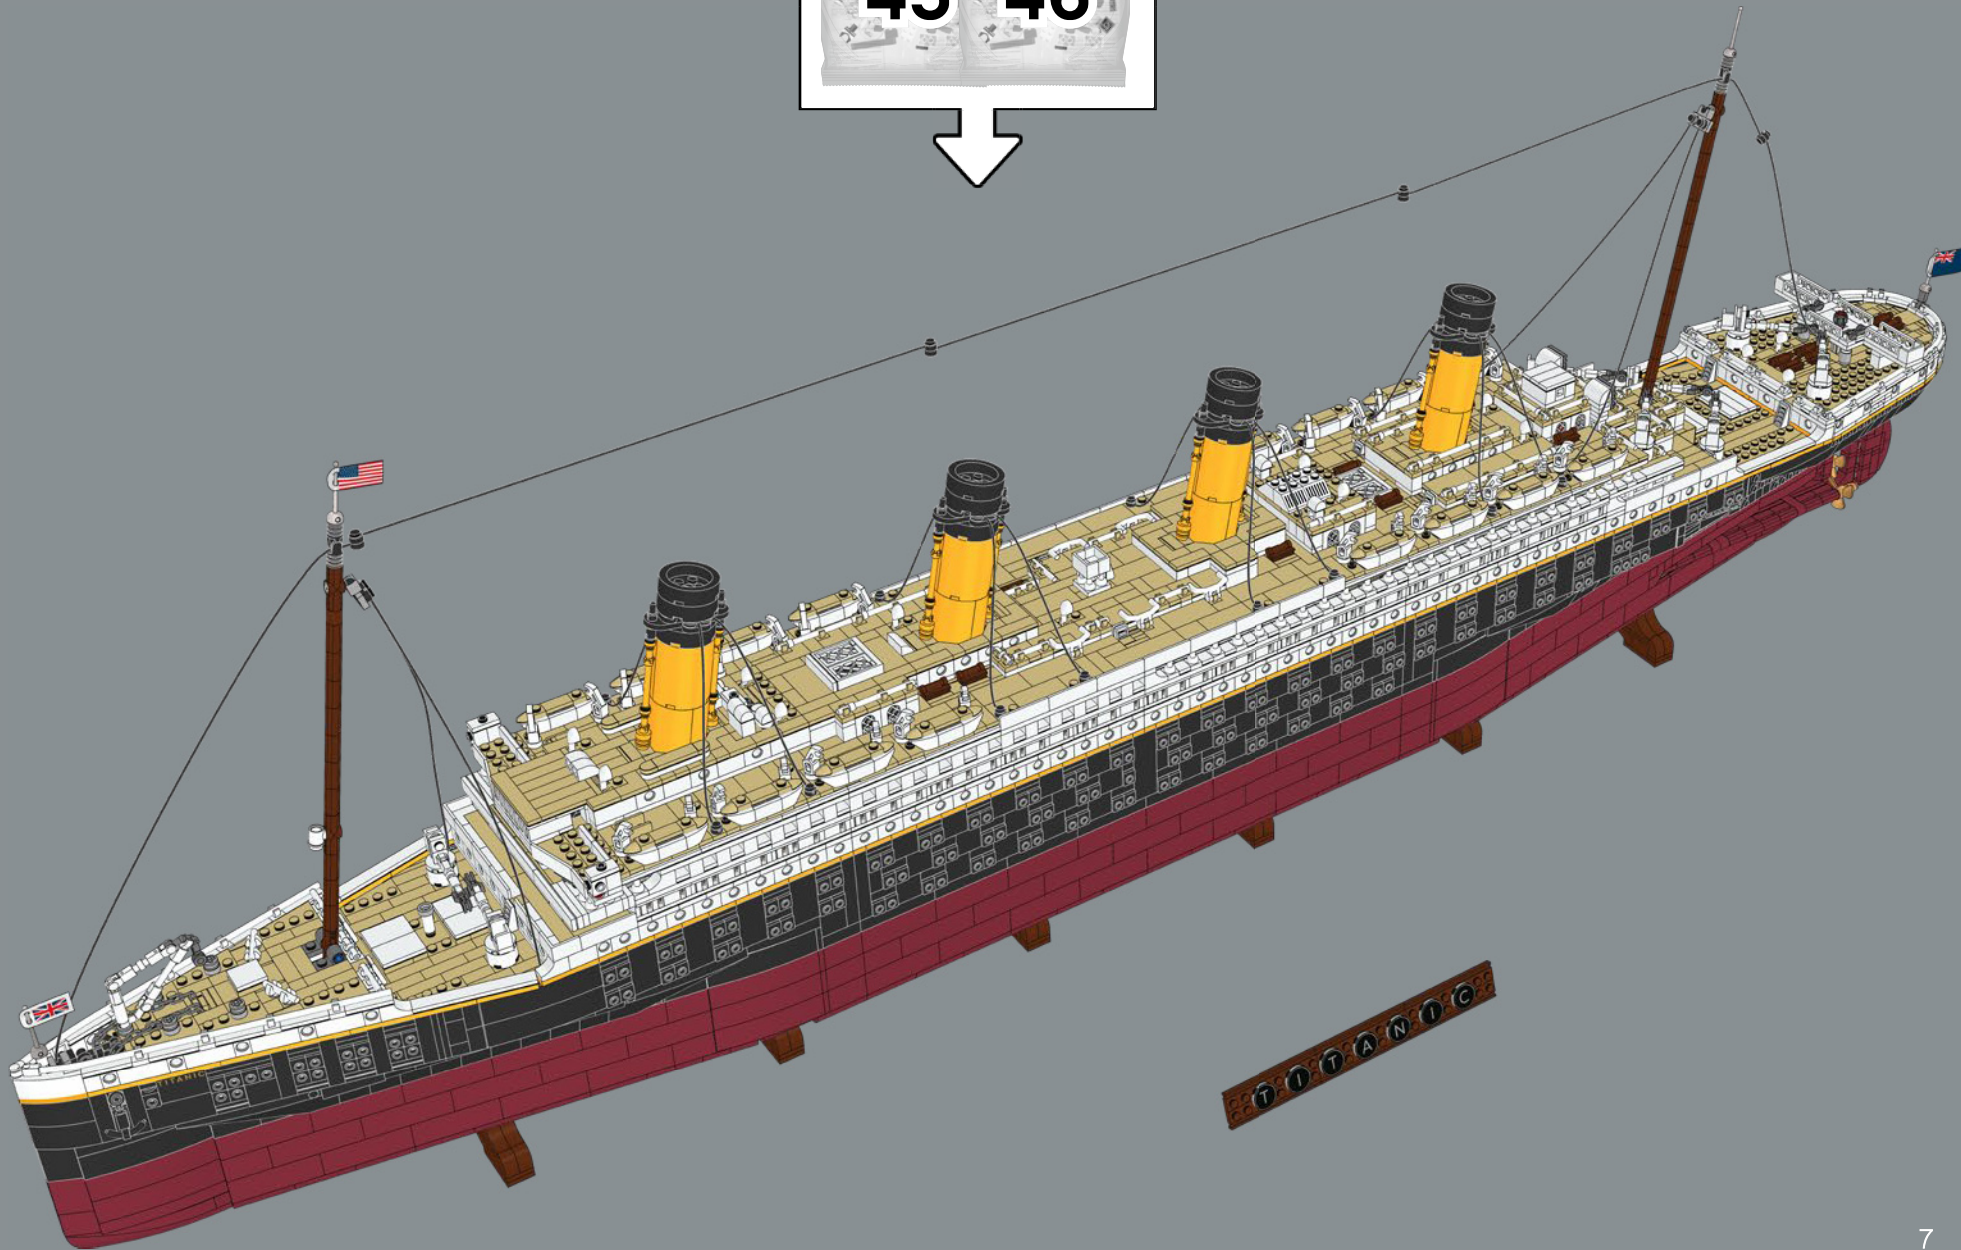

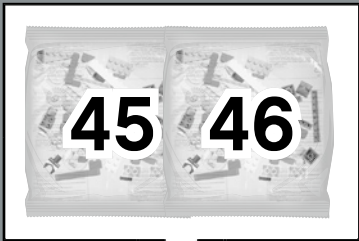

Il Titanic era 11 volte più lungo della balenottera azzurra, il più grande animale mai vissuto sulla Terra.

T I T A N I C

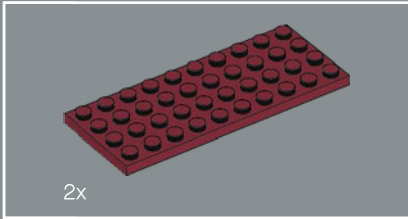

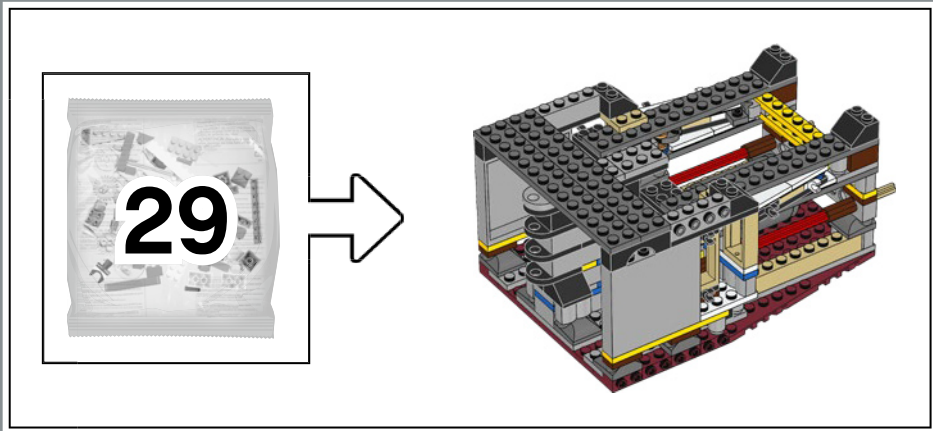

SEZIONE 5:

FUMAIOLO E SALA MACCHINE

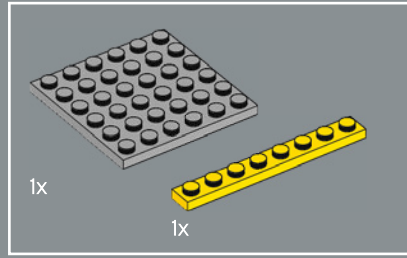

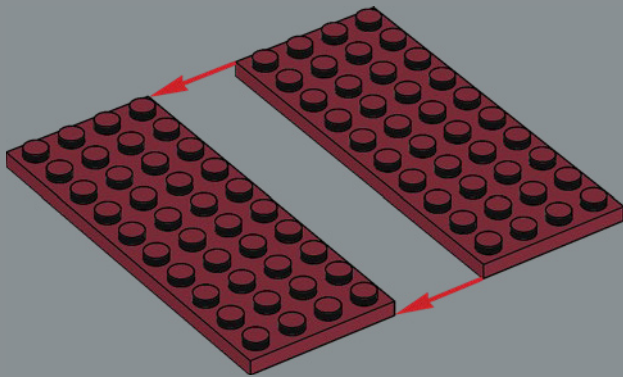

In questa sezione, il modello si restringe man mano che si assottiglia verso le eliche e il timone a poppa della nave. Qui è possibile costruire l'ultimo fumaiolo del modello. Sul vero *Titanic*, questo fumaiolo era fittizio, in quanto non era collegato ad alcuna caldaia, ma fu incluso nel design della nave per renderla esteticamente ancora più attraente e completa.

↓ Nella parte superiore di questa sezione, è possibile aggiungere la sala lettura della nave e alcune delle sue cabine di 2° classe.

Il *Titanic* era dotato di quattro fumaioli, anche se solo tre erano funzionanti: l'ultimo era una ciminiera installata per motivi estetici.

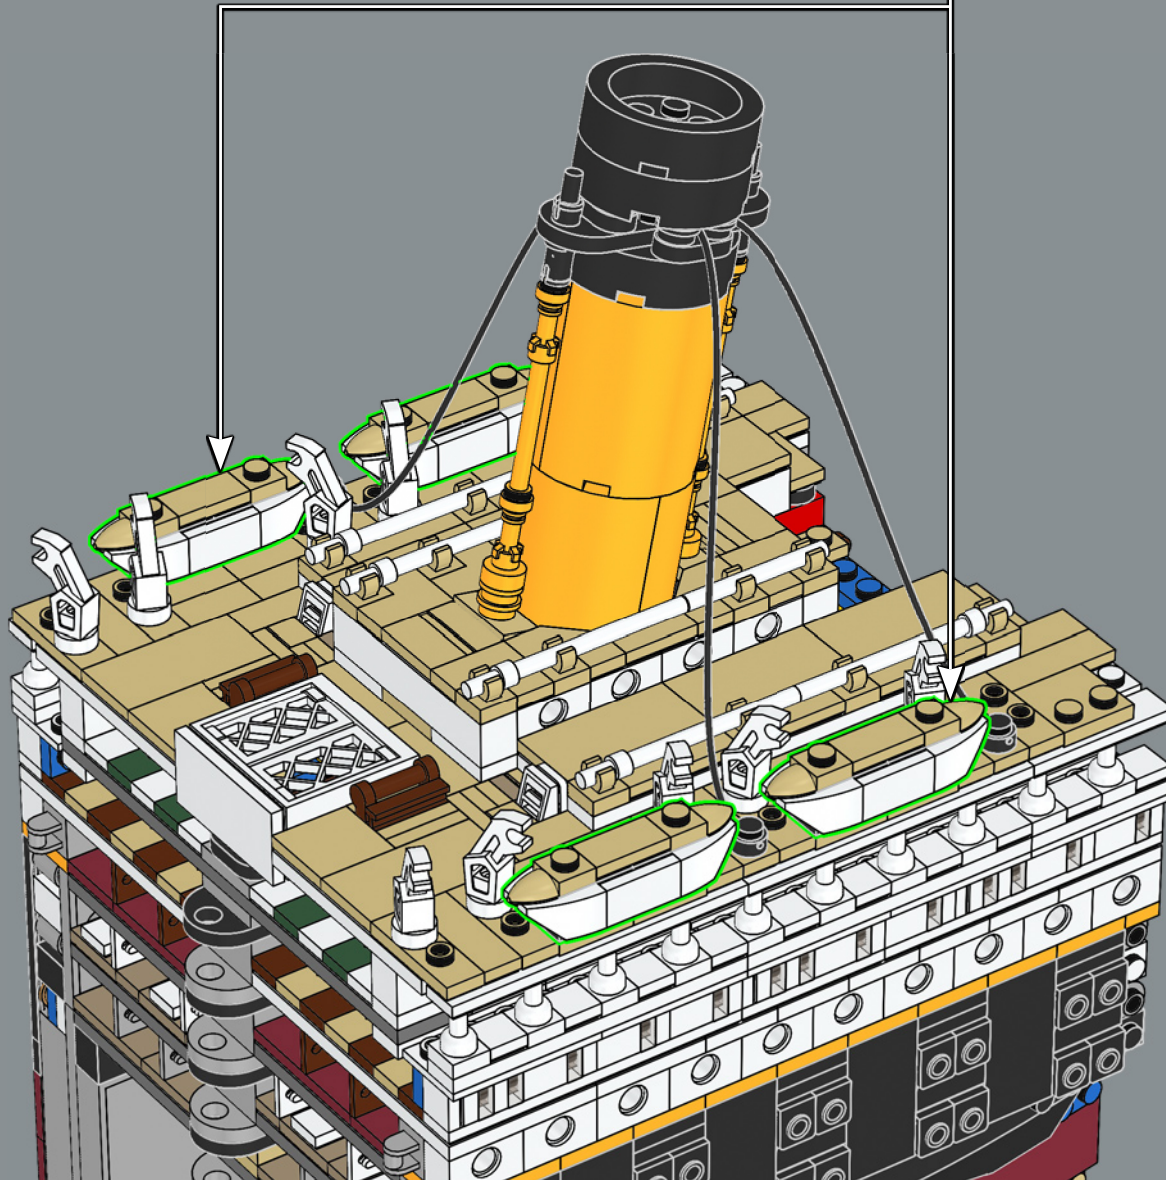

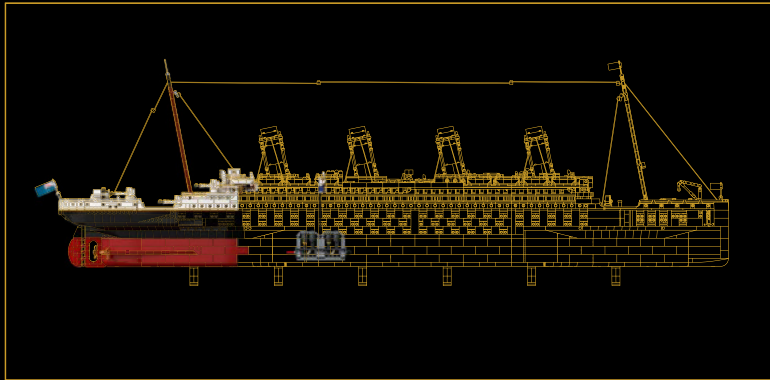

144

145

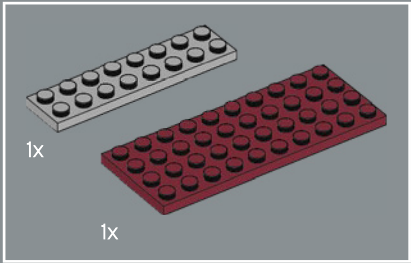

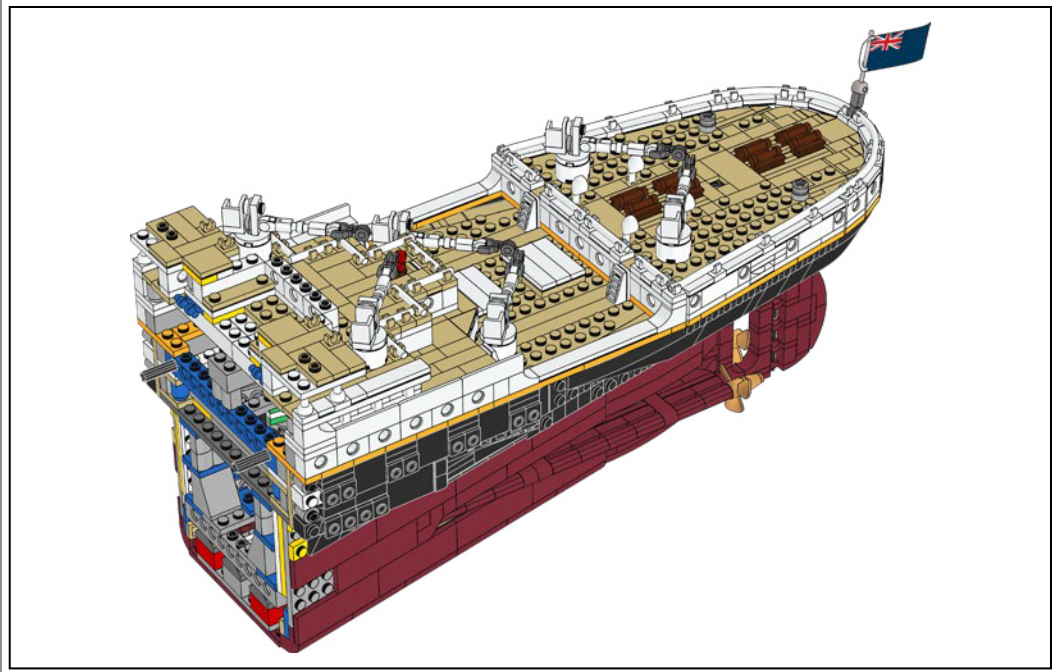

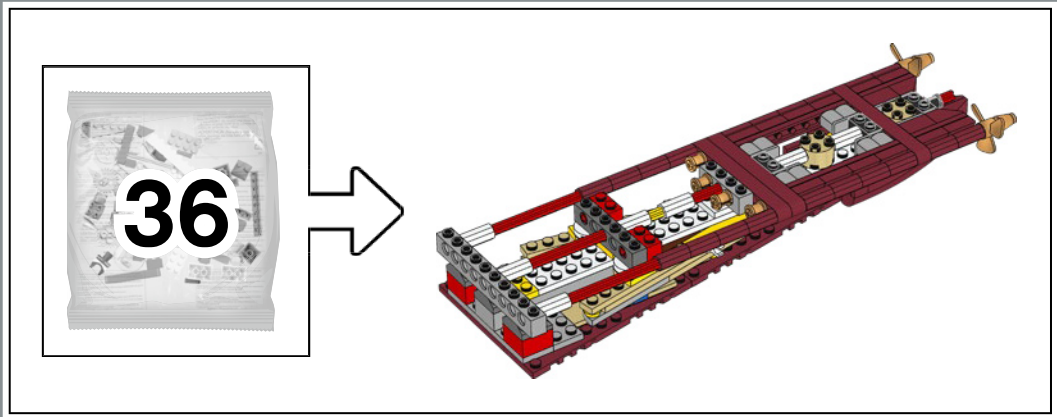

SEZIONE 6:

POPPA E COPERTA A POZZO

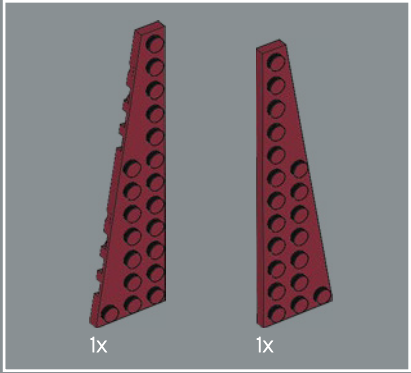

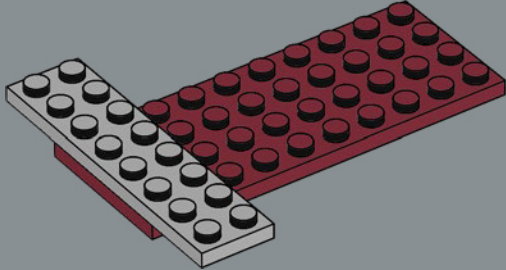

Questa sezione finale è la più complicata dello scafo e comprende il timone e tre alberi di trasmissione principali che collegano le eliche ai motori. Qui si costruiscono i due motori principali a pistoni, collegati direttamente alle eliche di babordo e tribordo. Girando le eliche si muovono gli alberi motore e i pistoni del motore all'interno del modello.

↓ I dettagli esterni di questa sezione includono il ponte di poppa e le panche per i passeggeri di 3° classe.
